

Introducing support for MariaDB Enterprise Server on IBM Power

1. MariaDB

MariaDB™ is a leading next-generation database company whose products are used by businesses of all sizes. They reach more than a billion users through Linux distributions and have been downloaded over one billion times.

MariaDB Enterprise Server is a leading production-grade open source database that runs anywhere – public, private, and hybrid cloud. With its purpose-built storage engine architecture, MariaDB Enterprise Server supports transactional, analytical, and mixed workloads for relational and JSON data models.

MariaDB MaxScale™ is an advanced database proxy for MariaDB Enterprise Server that helps you avoid downtime and provides consistent performance, scalability, and security for applications and data.

“MariaDB has always strived to provide customers with the best overall experience for application performance and scalability. By working closely with IBM and certifying MariaDB Enterprise Server to run on IBM Power, customers can run their demanding, data-intensive applications at scale with increased performance and stability of an enterprise-grade, relational, open source database on IBM Power.”

Jim Sears
VP of Global Alliances, MariaDB

2. IBM Power

IBM® Power® is known for its scalability and performance in handling the most demanding workloads. It provides superior virtualization and management features for flexibility and security with better isolation and an integrated stack.

“Running MariaDB Enterprise Server on IBM Power offers a range of benefits. Organizations leveraging the MariaDB and MaxScale database proxy on IBM Power architecture achieve a reliable and secure database solution optimized for performance and scalability.”

Gina King
Director of ISV Ecosystem & Alliances, IBM

3. Benefits

Clients leveraging MariaDB Enterprise Server with MaxScale on IBM Power benefit from enterprise reliability, stability, long-term support, and greater operational efficiency when managing large database deployments for business- and mission-critical applications.

- Scalability
- High availability
- Disaster recovery
- Data security
- Oracle Database compatibility
- JSON + relational data

4. Client Value

Clients choosing MariaDB Enterprise Server on Power require increased performance, reliability, security at the server level, and scalability for their application and database experience.

Clients experiencing a lack of support, reduced enterprise availability, or application downtime can easily migrate to MariaDB Enterprise Server on IBM Power.

Clients experiencing high Oracle licensing costs can easily migrate to MariaDB Enterprise Server on IBM Power.

Clients experiencing application downtime due to database outages, data loss, data consistency, or security concerns can easily upgrade to MariaDB Enterprise Server on IBM Power.

Clients on x86 can easily upgrade to MariaDB Enterprise Server on IBM Power.
